

KLATKA FARADAYA SPIGEN POUCH KEYLESS RFID SIGNAL BLOCKER BLACK

Product code: 8809811854022-AFA03754

EAN: 8809811854022

Protect your keys with the Spigen case! The anti-theft RFID case, also known as a Faraday Cage, is a professional protection system for owners of cars opened with the Keyless system.

Keyless Go keys allow for convenient, remote opening of the car, but they are also susceptible to break-ins and signal theft.

The specially designed case blocks the transmission of radio waves between the keys and the car, thus protecting it from theft by a potential thief.

The Spigen Pouch is equipped with a double layer of nano fibers that effectively block radio connections between the key and the car, thus protecting us from theft.

This functional gadget is made with attention to the smallest detail.

The aesthetic, stylish appearance makes the case an interesting accessory, and the practical 360-degree carabiner will increase the range of usage possibilities - it can be attached to a backpack or bag.

The precisely tailored RFID case is also a reliable way to protect credit cards and block signals from Bluetooth, Wifi, or GPS.

PRODUCT FEATURES:

- 100% Original
- Packed in original packaging
- Blocks radio wave signals
- Protects the car from theft
- Carabiner for attaching the key
- Stylish and elegant finish
- Made from durable materials
- Convenient magnetic closure
