SZKŁO HYBRYDOWE HOFI HYBRID PRO+ 2-PACK GARMIN VIVOACTIVE 5 BLACK

Product code: 9319456607123

EAN: 9319456607123

Can flexible mean better?

With a small thickness of only 0.28mm and full screen coverage, the Hofi hybrid glass is almost invisible.

Hardness at the level of 7H achieved through the use of ceramic coatings.

These are the features of a hybrid of glass and film, which means not only high resistance to pressure or scratches but also full touch sensitivity and perfect clarity and saturation of the image.

And finally, the most important, the greatest advantage of the product - it does not crack or shatter unlike traditional tempered glasses!

Check how to install:

INSTALLATION INSTRUCTIONS:

The installation of this model of glass looks different than in the case of traditional ordinary tempered glasses on a thin adhesive layer, it is somewhat more difficult due to the thicker adhesive layer.

In the initial phase of application, bubbles or air strips may remain trapped under the glass, which need to be pushed out with repeated movements to the edge; however, in this case, it is easiest to peel off the coating to the location of the air bubble and reapply it, pushing out the air with, for example, a bank card.

It should also be remembered that due to the curvature, the curvature of the glass must match the curvature of the screen.

If the glass does not stick on one of the sides, it means it has been applied crookedly; in such a case, it will need to be peeled off and the installation attempt repeated until successful.

Due to the polishing and milling of the screen, this may require several minutes of work in some cases, but the final result is stunning.

PRODUCT FEATURES:

- 100% Original
- Packed in original packaging
- Surface hardness 7H
- Thickness 0.28mm
- Maintains full touch sensitivity
- Precisely fitted
- Dimensions: ø38mm

SET INCLUDES:

- 2 x Hofi Hybrid Pro+ Glass
- 1 x Installation kit
