T33 REVERSE headphones

Wireless headphones controlled by a pressure sensor located at the base of the handset. They are equipped with noise reduction and contact mode, so you can decide if you want to hear your surroundings. In noise canceling mode, the headphones emit anti-noise waves to cancel out the noise. Thanks to the automatic connection function, after opening the case, a Bluetooth connection proposal is displayed on the nearest device.

While the device is pairing, the charging status of the headphones and the case are displayed.
